Frontend Angular Developer Job Description

Company Background

Map of Ag is a global pioneer in agricultural analysis and modelling technology. We provide expert knowledge and insight to agriculture and food chain industries from our offices in the UK, Argentina and New Zealand.

Providing access to intelligently sourced data and information from farms, we enable businesses within the agriculture industry and food chain to maximise the impact of planning and decision-making.

We are a young and exciting technology company building a web-based platform for managing and using data in the agricultural sector.

Following a merger with Evidence Group at the end of 2018, we're now expanding our team to accelerate the development and integration of our products.

The Role

We are seeking a skilled and enthusiastic Frontend Web Developer to join our team. Your focus will be on designing and implementing user interfaces that are easy to use. As part of the team, you will have a crucial role in evolving our products and ensuring they meet the needs of our customers and users globally.

You will be involved in:

- Improving and integrating existing web applications across the business; unifying user experience
- Translating user stories and wireframes into high-quality frontend interfaces
- Supporting product development and sales process; including prototyping new concepts and ideas
- Developing reusable UI components and libraries for use across solutions

Profile Sought

Required Technical Skills

- Experience implementing Single Page Apps from conceptual ideas to delivery
- Thorough understanding of Angular (or AngularJS), and its core principals

- Passion for writing clean, modular, reusable and maintainable code
- Experience working with Bootstrap, Angular Material or other UI component library
- Familiarity interacting with web APIs and 3rd party libraries
- Familiarity with build automation and tooling; Gulp; Webpack; Yarn etc.
- Comfortable with code versioning tools, and code reviews; we use Git
- Some experience of profiling and optimisation to ensure application performance

Desirable Technical Skills

- Experience gathering product feedback from users; including A/B testing
- Experience of ensuring quality assurance through end-to-end testing; including test automation
- Familiarity with another frontend framework: Vue or React
- Comfortable working with 3rd party libraries and APIs (e.g. Google Maps)
- Bonus points for backend development experience in PHP, C# or Python

Basic Skills

- Good communication skills and excellent command of English
- Work collaboratively with colleagues to solve problems
- Be organised, take the initiative and work effectively to meet deadlines
- Ability to work to a very high standard in demanding situations with tight deadlines
- Ability to work equally as well within a team and independently
- Bonus points if you have any experience in agriculture

Location

You would work from our company offices in Penrith. [CA11 9FF]

The position may involve some travel to other company offices and occasional client meetings.

Salary

Dependant on experience.
